- The satisfaction of the customer's explicit requests (by means of a commercial office for the foreign and Italian market, with high competence and stronger and stronger experience in the field of mechanical tooling);
- The satisfaction of the customer's implicit requests (considering the received orders or the sent offers critically, checking periodically and frequently the observance of deliveries to the customer, also visiting the customer directly);
- The service provided by the staff's experience;
- The management of claims and possible faulty products (for both manufactured goods and internal industrial processes);
- The constant updating in the technical and computer field.

These activities are based on the following principles:

- Internal and external staff's involvement in quality;
- Identification of the industrial processes that condition the customer's satisfaction and definition of the ways to perform and check these processes;
- Research development in the field of quality of service and/or manufactured goods;
- Constant analysis and control of the processes in order to find the margins of improvement.

The above mentioned principles will be developed according to the following operating procedures:

- Planning and implementation of a Quality System certified according to the UNI EN ISO 9001:2000 Norms

Arrangement, in this system, for specific control and improvement of the processes that determine the customer's satisfaction.

La **KINTEK** per raggiungere ciò, si impone di perseguire, garantire e migliorare:

- Il rispetto dei requisiti sia di legge che tecnici relativi ai prodotti forniti (mediante un continuo aggiornamento del proprio personale ottenuto tramite partecipazione a fiere, e a corsi interni);
- Il rispetto delle richieste esplicite del cliente (mettendo a disposizione un ufficio commerciale per il mercato estero e Italia, di elevata professionalità e con un'esperienza che è sempre più consolidata nel settore della utensileria meccanica);
- Il rispetto delle richieste implicite del cliente (mediante un'analisi critica degli ordini ricevuti o dell'offerte inviate, mediante un controllo periodico e frequente sul rispetto delle consegne al cliente, mediante visite dirette presso il cliente);
- Il servizio attraverso l'esperienza del proprio personale;
- La gestione dei reclami e delle eventuali non conformità riscontrate (sia relative al prodotto finito che ai propri processi aziendali);
- Il continuo aggiornamento in campo tecnico e informatico.

Tali attività si fondano sui seguenti principi:

- Involgimento di tutto il personale aziendale interno ed esterno verso la qualità;
- Individuazione dei processi aziendali che influenzano la soddisfazione del Cliente e definizione delle modalità di esecuzione e controllo di tali processi;
- Sviluppo delle attività di ricerca finalizzate alla gestione dei processi che influenzano la qualità del servizio e/o prodotto fornito;
- Analisi e monitoraggio continuo dei processi allo scopo di identificare i margini di miglioramento.

I principi individuati saranno sviluppati attraverso le seguenti modalità operative:

- Progettazione ed Implementazione di un Sistema di Gestione per la Qualità certificabile ai sensi delle Norme UNI EN ISO 9001:2000

Predisposizione, nell'ambito del sistema, di specifiche attività di monitoraggio e miglioramento dei processi che influenzano la soddisfazione del Cliente.

COAXIALITE' PORTE-PINCE

La norme DIN6391 admet une erreur maximum du 0.016 soit pour les porte-pinces DIN6499 soit pour DIN6388. Dans notre production l'écart d'excentricité maximum entre cône ISO et logement de la pince est compris entre: 0,003 et 0,0010 mm.

COAXIALITE' PORTE-FRAISES FIXES ET COMBINES

Les porte-fraises fixes et combinés de notre production suivent la spécification de la norme DIN6358, qui prévoit pour les diamètres 16-22-27-32-40 une concentricité de 0,01 pour ISO 30 et ISO 40 0,015 pour ISO 50

COAXIALITE' PORTE-FRAISES WELDON

Suivant les spécifications DIN 6359-1 les porte-fraises WELDON doivent suivre les conditions suivantes:

Trou : tolérance H5

Coaxialité: écart maximum toléré entre cône et logement du Weldon <0.01 (pour ISO 40).

Nous assurons la tolérance prévue sur le trou et une coaxialité en moyenne de 0.005.

EQUILIBRAGE

La plupart des porte-outils sont pré-équilibrés en classe G 6,3 8000 Tr/Min -1. ou équilibrés à 12000 Tr/Min-1. A côté du tableau de description et dimensions des produits il y a l'indication de la valeur d'équilibrage additionnel.

Ausführung mit Kühlmittelzufuhr zentral und an dem Bund.

Durch die seitlichen Bohrungen und die Kühlmitteldüsen ermöglicht dieses System das Kühlmittel direkt an den Kontaktpunkt des Werkzeuges zu leiten.

Außerdem erfolgt Zentral-Kühlmittelzufuhr, wenn zwei Schrauben die Bohrungen verschließen.

With central and lateral cooling possibility.

This type of system, thanks to two lateral holes, permits to direct the cooling jet through the two balls to the connection point of the tool. Besides, with the application of two screws on the balls, you can have the lubrication through the centre.

Avec possibilité d'arrosage soit central, soit latéral. Ce système, avec les trous latéraux, permet, avec les deux billes d'arrosage de diriger le liquide sur le point de contact de l'outil.

De plus, il est possible d'avoir l'arrosage au centre en bouchant avec des vis les trous des billes.

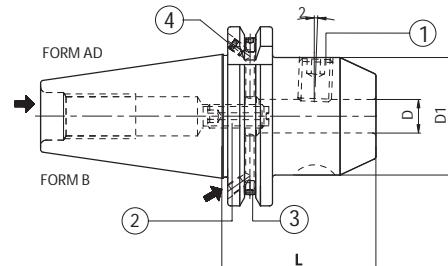

Con possibilità di refrigerazione sia centrale che laterale.

Questo tipo di sistema grazie ai due fori laterali, permette, mediante le due sfere di dirigere il getto del refrigerante nel punto di contatto dell'utensile. Inoltre, con l'applicazione di due grani sulle sfere si ottiene la lubrificazione attraverso il centro.

Возможность центрального и бокового охлаждения. Благодаря двум боковым отверстиям, эта система позволяет направлять СОЖ к месту крепления режущего инструмента.

Если закрепить два винта в отверстиях фланца, СОЖ подается через центр.

For coolant through V-flange bores (B) or center of toolholders (AD). For central coolant, the V-flange channels are closed by socket screws.

Il lubrificante passa dai fori sulla flangia (B) oppure, chiudendo i fori con le apposite viti, dal centro del mandrino (AD). Для подачи СОЖ через центр инструмента необходимо закрутить винты в отверстиях фланца.

Our shell end mill adaptors meet the requirements of the norm DIN6358, which prescribes for diameters 16-22-27-32-40 a runout accuracy of: 0, 01 for SK 30/40 0,015 for SK 50.

WELDON END MILL HOLDER'S RUNOUT ACCURACY

According to the norm DIN6359-1 Weldon end mill holders have to meet the following requirements:

Bore: H5 tolerance

Runout accuracy: < 0.01 (for SK 40)

Our end mill adaptors ensure the prescribed holes' tolerance and have a runout accuracy which is normally 0.005

Ausführung mit Kühlmittelzufuhr zentral und an den Bund.

Durch die seitlichen Bohrungen und die Kühlmitteldüsen ermöglicht dieses System das Kühlmittel direkt an den Kontaktpunkt des Werkzeuges zu leiten.

Außerdem erfolgt Zentral-Kühlmittelzufuhr, wenn zwei Schrauben die Bohrungen verschließen.

With central and lateral cooling possibility.

This type of system, thanks to two lateral holes, permits to direct the cooling jet through the two balls to the connection point of the tool.

Besides, with the application of two screws on the balls, you can have the lubrication trough the centre.

Avec possibilité d'arrosage soit central, soit latéral. Ce système, avec les trous latéraux, permet, avec les deux billes d'arrosage de diriger le liquide sur le point de contact de l'outil.

De plus, il est possible d'avoir l'arrosage au centre en bouchant avec des vis les trous des billes.

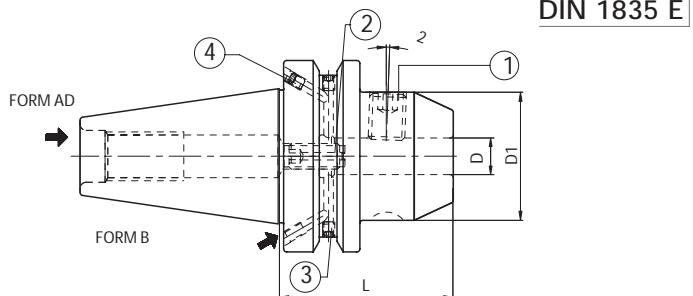

Con possibilità di refrigerazione sia centrale che laterale.

Questo tipo di sistema grazie ai due fori laterali, permette, mediante le due sfere di dirigere il getto del refrigerante nel punto di contatto dell'utensile. Inoltre, con l'applicazione di due grani sulle sfere si ottiene la lubrificazione attraverso il centro.

Возможность центрального и бокового охлаждения. Благодаря двум боковым отверстиям, эта система позволяет направлять СОЖ к месту крепления режущего инструмента.

Если закрепить два винта в отверстиях фланца, СОЖ подается через центр.
